Wessington Cryogenics are a leading manufacturer of cryogenics vessels serving a global market, and consequently, sharing the responsibility to preserve the environment. As part of our strategy to promote continuous improvement and sustainable development, Wessington Cryogenics recognise a responsibility to uphold and improve environmental performance both internally and externally and are committed to minimising the environmental impact of our products and operations.

We have assessed our current environmental impacts and highlighted the following key areas for consideration;

- Waste Management
- Awareness - Employees and stakeholder
- Transport
- Energy and Utilities

In order to improve these environmental areas, procedures will be implemented into all significant areas of the business, both manufacturing and non-manufacturing related. In particular the company will;

- Demonstrate responsible environmental management to customers, suppliers and stakeholders and encourage them to support it,
- Comply with all applicable legislation and regulations,
- Reduce landfill wherever possible by reducing materials wastage and promoting recycling throughout the premises,
- Develop performance indicators to measure improvement which can be applied to future work,
- Ensure all staff fully understand and are committed to environmental procedures, and are given their chance to contribute suggestions,
- Seek to reduce air, water, noise and light pollution from our operations and reduce the impact on the local community,
- Keep up to date with relevant environmental legislation and achieve environmental accreditation if this is beneficial and affordable.

Our commitment to health and safety, quality management and continuous improvement will guarantee that our environmental policy will be reviewed, and we will perform an environmental audit at least annually, the results of which will incorporate any circumstantial changes, future aims and objectives.

Colin Robertson CBE

Chairman

3rd January 2026
